

**A READY TO USE BAIT FOR CREVICE, CRACK, OR SPOT TREATMENT FOR THE CONTROL OF COCKROACHES BY PROFESSIONAL PEST CONTROL OPERATORS AS PER THE DIRECTIONS FOR USE.**

**General Information:**

Goliath® 0.05% Gel is an insecticide for professional use, designed to control cockroaches (*Blattella germanica*, *Periplaneta Americana*, *Blattella orientalis*).

- Fast and efficient action for immediate results with control within hours of ingestion by the cockroach
- Cascade effect for complete control of cockroaches in hidden spots hence user has an easy time applying it and does not strain to reach hidden areas.
- Low doses - safer use and less exposure to user
- Precise application for speed and accuracy saving time for user and reducing cost of application (single person can apply large areas)
- It provides a fast and cost-effective control of cockroaches
- Has low odour, renders it undetectable to the user making it a favourite for restaurants and for many households

**Directions for use and Application Rates:**

| SITUATION                                         | PEST                                 | RATE                                                                                                                                                                                        | CRITICAL COMMENTS                                                                                  |
|---------------------------------------------------|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| Domestic, Commercial and Public Service Buildings | German and other common cockroaches. | Apply 1-3 spots per m <sup>2</sup> . Recommended spot size is 0.03-0.06 g. Increase the number of spots (up to 3) and spot size depending upon severity of infestation and species present. | Gel placement should be at or near areas where cockroaches gather, such as in cracks and crevices. |
