

CABRIO® DUO

Cabrio® Duo is an emulsifiable concentrate fungicide for the control of frog-eye and alternaria in tobacco.

- **DO NOT** apply more than two applications of Cabrio Duo in a row and more than 4 applications per year.
- Apply enough volume of spray solution that will enable a complete and uniform wetting of the crop, but minimize dripping.
- Cabrio® Duo should be applied preventively.
- It is recommended to use Cabrio® Duo during the critical periods of development of crop diseases listed.
- Shorter intervals between treatments and/or higher rates are recommended in conditions with a high disease pressure, heavy rainfall or rapid growth.
- Use of Cabrio® Duo as part of a spray program that includes other fungicides from different classes with different modes of action
- **DO NOT** apply Cabrio® Duo until the leaves are dry

APPLICATION RATES:

CROP	DISEASE	Dose Rate	Spray Intervals
Tobacco	Frog Eye (<i>Cercospora nicotianae</i>) Alternaria (<i>Alternaria alternata</i>)	1.5 l /ha in 200 l water / ha (Under conditions of high disease pressure apply at 2.5 l/ha)	Begin sprays at 8 WAP. Apply at 2 week intervals up to 14 WAP. (WAP = weeks after planting)
