

CeCeCe®

CeCeCe (Cycocel) is a growth regulant for use in cotton and wheat

CeCeCe Plant Growth Regulant is compatible with most growth regulators, insecticides, fungicides, foliar fertilizers and herbicides but **SHOULD NOT** be mixed with dinitro-compounds such as DNOC and contact herbicides.

CROP	USE	RATE	APPLICATION
Winter wheat	To reduce lodging and wind damage	2.1 l/Ha	(a) Ground Application Dilute 2.1 L CYCOCEL in 300-600 L water. Apply as a foliar spray at first stem elongation (5 – 7 leaf stage). Do not apply during rain or if rain is imminent. (b) Aerial Application Dilute 2.1 L CYCOCEL in 22 – 30 L water. Do not apply during rain or if rain is imminent.
Cotton	To reduce rank growth	45 – 66 ml/Ha	Where there is no stress to the crop, apply when 5 – 10% has at least one flower and the crop is 800 mm tall. Apply either 1 application at 66 ml/Ha or two split applications of 45 ml/Ha at first flower and the second of 21 ml/Ha two weeks later. Ground, Aerial or hand held ULV Application
