

FASTAC SC is a broad spectrum pyrethoid insecticide effective against a wide range of insect pests on cotton, maize, macadamias, cruciferae, potatoes and for cutworm on all row crops.

KEY ADVANTAGES:

- **Fast acting insecticide**
 - **Tried and trusted**
- **Low application rates**
 - **Cost effective**

CROP	PEST	RATE	APPLICATION
Cotton	Heliothis bollworm Red bollworm Spiny bollworm Leaf eaters Jassids Stainers	80 – 120 ml / ha	Treat on a basis of weekly assessments of pest control requirements. NOTE: FASTAC may not be used on cotton before 25 th December or after 1 st March in the SE Lowveld or before 1 st February elsewhere.
Maize	Cutworm Stalkborer	120 ml / ha 125 ml / ha	Applied at planting or after germination in a 300 mm band along the row. Apply as a preventative treatment against young larvae based on scouting for eggs on plants. Apply 7 – 10 days after 5% or more plants are found to be infested with eggs. Direct spray into the funnel. Larvae longer than 10 mm or larvae that have already tunnelled into the stalk will not be controlled effectively.
Macadamia	Stink bug	10 ml / 100 lit water	Apply as a high volume, full cover spray when the nuts are marble size (October/November) and repeat four weeks later. A third application may be necessary four weeks after the second application.

Cruciferae	American bollworm Diamond back moth larvae Thrips Cutworm	7 ml / 100 lit water	Ensure thorough wetting of the plant. Commence spraying as soon as first signs of the pest occur and repeat every 10 to 14 days. Can be applied as a preventative or corrective treatment.
Potatoes	Potato tuber moth Lesser army worm	100 ml / ha	Apply preventatively as a full cover spray from when the plants are 1 month old. Repeat at 8 to 14 day intervals. Depending on plant size apply in 300 to 500 l water / ha. Ensure thorough penetration and coverage.
