

FENDONA 6 SC®

A residual insecticide for the control of mosquitoes, flies and cockroaches in domestic and public buildings and areas. Can also be used for the treatment of mosquito nets to control mosquitoes and other biting insects.

GENERAL INFORMATION:

FENDONA 6SC controls insects by contact and ingestion and is recommended for the control of mosquitoes, flies, cockroaches, fleas and other household pests. **FENDONA 6SC** is of low toxicity to humans and other mammals and is safe to use in domestic and public areas. When applied as a surface spray **FENDONA 6SC** offers long residual activity.

INDOOR RESIDUAL SPRAYING:

Dosage Rate: - Mix **100ml** of **FENDONA 6SC** in **10 litres water**. The spray wash suspension is applied to just before point of run-off, equivalent to a rate of 1 litre per 20 square meters of most surfaces. This rate of application will give excellent control of mosquitoes for extended periods.

APPLICATION:

FENDONA 6SC can be applied with a knapsack sprayer or other conventional spraying equipment used for residual applications. In the absence of any spraying equipment, dilute **100 ml** of **FENDONA 6SC** with **20 litres** of water and splash the mixture onto the desired surface from a small container or with the aid of a broad brush. Premises may be re-occupied as soon as spraying has been completed and the spray is dry.

MOSQUITO NETS:

FENDONA 6SC can be used to treat mosquito nets for effective and long lasting control of mosquitoes, bedbugs, ticks and other biting insects.

Dosage Rates: Each litre of **FENDONA 6SC** contains 60 000 mg of active ingredient. The recommended dose rate for mosquito nets is 30-40 mg/m². The surface area of a single net is about 9 m², therefore one would require **4.5 mls** of **FENDONA 6SC** to achieve 30 mg/m².

Application:

1. Pour water into a bucket or dish (amount of water will depend on the absorption rate of the net).
2. Add the required amount of **FENDONA 6SC**.
3. Submerge the net in the mixture and agitate for 2 minutes to ensure the product is evenly distributed.
4. Take out and allow excess liquid to drain back. DO NOT WRING. Place on a flat, non-absorbent surface to dry.
