

OPERA™

A systemic fungicide for the control of various fungal diseases in maize, soyabeans, wheat, barley and sugarcane.

AgCelence® – Expect More

OPERA is composed of 2 active ingredients with contact and systemic activities for the control of various tough fungal diseases.

OPERA has shown superior benefits through **AgCelence®** effects –

- Improved water efficiency
- Improves assimilation of nitrogen
- Increases CO₂ uptake
- Inhibits ethylene
- Keeps leaves greener and healthier
- Induces resistance against viruses and bacteria.

APPLICATION RATES:

CROP	DISEASE	RATE L/HA	DIRECTION FOR APPLICATION
MAIZE	Grey Leaf Spot Northern Leaf Blight Rust	0.75	Apply as part of a spray programme at 28 days after emergence or when disease symptoms are first observed on the basal 4 -5 leaves and before infection levels reach 5% on the lowest leaves. Apply a second application 3 weeks after the first application.
SOYABEANS	Soya Rust Red Leaf Blotch Frog Eye	0.5	Spray preventively before first signs of disease development is noticed (normally at onset flowering) and repeat 3- 4weeks. Apply the shorter interval of 3 weeks when high disease pressure is expected due to weather conditions that favour disease development.

WHEAT	Rust Septoria Leaf Spot Powdery Mildew	0.75	Commence spraying latest at the first sign of infection. Apply a second application 3-4 weeks later. If high disease pressure occurs apply a third application with fungicide from another class and different mode of action.
BARLEY	Leaf Spot Powdery Mildew Rust Net Blotch	0.75	Commence spraying latest at the first sign of infection. Apply a second application 3-4 weeks later if high disease pressure occurs.
SUGARCANE	Common Brown Rust	0.75	Apply a minimum of two applications per crop. Spray when the sugarcane has enough leaf area to take up the Opera®. First application should be done not earlier than 4 weeks after Planting (or harvest for ratoon crops). The second application should be done 4 weeks after the first application. It is advisable to apply the Opera when the sugarcane is actively growing (i.e. avoid the cold months May-July and dry months when there is no irrigating).
