

STORM SECURE®

GENERAL INFORMATION:

STORM SECURE is a potent anticoagulant rodenticide effective against all species of rats and mice, including those resistant to other products. STORM SECURE will kill rats and mice following a single feed, but death occurs after several days, therefore bait shyness and the need for pre-baiting are avoided.

STORM SECURE is ready to use and should not be diluted by the addition of other foodstuffs. STORM should only be applied in accordance with the directions for use and precautions as given.

APPLICATION:

A thorough survey of the infested area, particularly secluded and sheltered places, is essential to determine the extent and severity of the infestation.

RATS: Place 2-3 blocks in several bait trays at numerous locations close to holes, runways and where rats are active. In areas of high infestation, bait points may be only 5 metres apart; this distance increasing up to 10 metres where rats are scarce. Put one wax block inside each active burrow.

MICE: Place a block in covered bait trays in many locations throughout the infested area, approximately 1metre apart along mouse runs and where mice are known to feed. When placed, block baits should be made inaccessible to children, domestic animals and birds.

INSPECTION:

Inspect the bait points after 3 days and replace any blocks which may have been consumed. Repeat 4 days later and then every 7 days and move untouched blocks to active areas. Most infestations will be eliminated in 21 days.
